Oxley-Giddings  
Recreation from  
1870 gas era

Shown with  
0175G shades  
but 0245G is  
also has a  
very nice  
affect

**950-HCR-RC and 951-10L-CH** are perfect reproductions from a provenance Oxley-Giddings 1870 gasolier. 950 comes standard at 45" tall and a diameter of 34". Since it has 4" fitters...any 4" fitter shade can be used, even antiques. But, we recommend 0175G or 0234G shown above. If 45" is too tall we can adjust by deducting the two optional top tiers of crystals to get it as short as 34". Or, we can make it anywhere between

these two heights but will take some adaptation and perhaps moving crystals around. Lengthening is also possible for a small charge. **951-10L-CH** comes standard at 51" tall and a diameter of 34". Since it has 4" fitters...any 4" fitter shade can be used, even antiques. But, we recommend 0175G or 0234G shown above. Can also be made longer.

*Shades are sold separately. Both fixtures have 4" fitters.*

**134-CCL-1L** What a great low ceiling light this is. Lovely reverse painted Nouveau/Deco shade nested in a solid brass, but antiqued, frame. So very attractive. Diameter only 12 1/4" with a very useful 11 1/2" in height. If you have a bit more height...then **135-DEC-1L** can be used since it has a height of 21.5" which can be shortened to 15" by removing links of chain.

*Both of these fixtures (134 and 135) are supplied complete with the center shade*

**656-EL-5L** A lovely Neo-Grec revival five light chandelier which is just so classy. Made from a provenance attributed to Mitchell-Vance, it has been recreated with only the finest materials and authentic shapes and techniques. The central stem vase was recreated with a 5 part "break-down" spinning die which took 3 months to make. Therefore, the resulting parts are lovely and authentic. Looks great with our 054G "mellon" shade and nice also with 0245G & 0175G. It has a height of 34" but can be shortened to 27". With shades...diameter is 26".

**777-APR-BR** What a lovely monster of a light. 32" tall,,15" wide...32lbs in weight. Our sample fixture was from an antique building in the French Quarter of New Orleans some years ago. It makes a wonderful statement. Yes...capable of 200 or greater watts of light. Very special and the shades are kept by us as replacements if ever needed.
