**Mission or Arts & Crafts style chandeliers.**

Combination gas and electric fixtures were made at the turn of the century and for as long as 20+ years thereafter. Electrical supplies were not always reliable, in every location of America, at this time. There were two main types of "up gas" fixtures. One was a simple candletube, like the fixtures on this page; the other was a wide flame burner surrounded by a glass shade as appears on the next page. All chandeliers on this page are priced as illustrated com-

plete with the glass candletubes; bobacees and art glass & brass shades. Select from 3 art glass colors available for any shade--colors shown on the shade page. There's only 4 exceptions: **536; 541; 585; 598** i.e. lights that take glass shades. Shades for only these four lights are purchased separately. All of these chandeliers have the same measurements: 44" tall (can be shortened to as much as 29") The spread of the arms w/- shades is 25". Extension kits for longer drops or vaulted ceiling kits are available.

**598-SGE-SA**  
Four arm chandelier revival of gas and electric style Chandelier. Glass electric shades are ordered separately in this case. Suggested shades for 598 are: 065G, 080G, 083G or leaded 093G

Isn't this a nice combination !  
The best of Mission with a fine "hand made" 093G leaded shade. The look is so different we just had to show this sconce twice. Measurements as when you use a glass shade, but, the look here is so very much different. Of course, this optional 093G shade can be used on any fixture that takes a 2 1/4" fitter glass shade with the striking results you see here.
